

[Computer Program Product Containing Electronic Transcript and Exhibit Files and Method for Making the Same]

Abstract

The present invention provides a computer program product that includes electronic transcripts, exhibits, and an association therebetween. In one example, the method includes providing one or more electronic transcript files; providing one or more exhibit files associated with the one or more electronic transcript files; and providing an executable viewer file. The transcript and exhibit image files and their association, as well as the executable viewer file, may be stored in a local, remote, or removable media. In this manner, a user can activate the viewer and view the electronic transcripts and associated exhibits without the need for any additional software.
